網上中文輸入工具

“網上中文輸入工具”現已推出使用：

<http://www.ccli.gov.hk/webime.html>

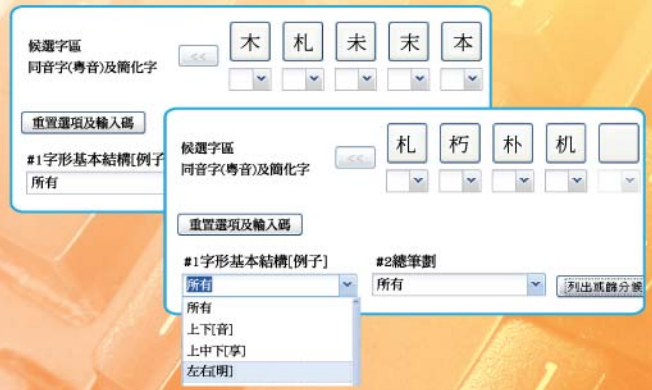

這套工具方便用戶在網上瀏覽時，尤其是在使用沒有中文輸入設施的公用電腦上網時輸入中文字。

“網上中文輸入工具”的主要功能：

- 提供五種常用的中文輸入法，即倉頡、簡易、漢語拼音、粵語拼音和部首／筆劃。
- 可利用“字形基本結構”和“總筆劃”，減少所列出的候選字，讓用戶更容易選取擬輸入的字。

例如用戶擬輸入“札”字。

如只註明部首“木”，所列出的候選字會超過500個。但如註明“左右結構”和總筆劃4-6劃，所列出的候選字則只有4個。

- 可列出與擬輸入字相同粵音的候選字，讓用戶更容易選取擬輸入的字。

例如用戶擬輸入“終”字。

可輸入粵音相同的“中”字，從而在候選字中選取“終”字。

- 備有超過15,000個收納於以下字庫的字符：

- 國際表意文字子集
- 香港增補字符集

- 字符的內碼均按以下標準編訂：

- ISO/IEC 10646-1:2000
- ISO/IEC 10646:2003及其第一修訂版

歡迎市民隨時使用“網上中文輸入工具”。

 **User - friendly**

 **Free of charge**

 **No need for
installation**

Web-based Chinese Input Service

A web-based Chinese Input Service (WebIME) is now available at:

<http://www.ccli.gov.hk/webime.html>

It facilitates users to input Chinese characters when surfing the Internet, particularly through those public workstations without Chinese input facilities.

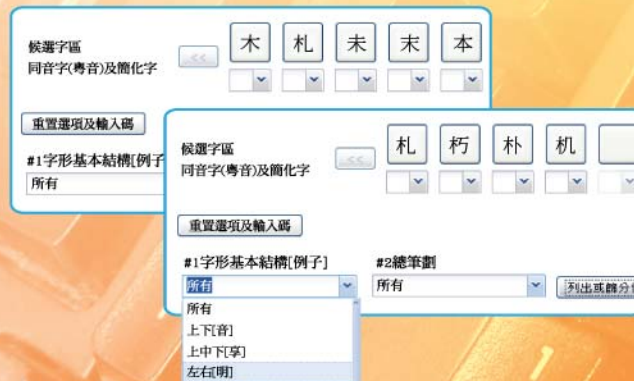

The key features of the WebIME are:

 It provides five common Chinese input methods, namely Cangjie, simplified Cangjie, Hanyu pinyin, Cantonese Pronunciation and Radical/Number of Strokes.

 It can reduce the number of candidate characters as long as the glyph structure and ranges of the total number of the strokes are specified, thus enabling users to pick up the desired character more easily.

For example: the desired character is “札”.

If only the radical “木” is specified, over 500 candidate characters will be shown. If, however, “Left-Right Structure” and total number of strokes of 4-6 are specified, only 4 candidate characters will be shown.

The screenshot shows the WebIME interface with two panels. The top panel shows the character selection area with the radical “木” selected, resulting in candidate characters “札”, “朽”, “朴”, and “机”. The bottom panel shows the structure and stroke selection area, with “#1字形基本結構[例子]” set to “所有” and “#2總筆劃” set to “所有”, resulting in the same candidate characters.

It can list candidate characters with the same Cantonese pronunciation as the desired character.

For example: the desired character is “終”.

You can input “中” and then select the desired character “終” from the list of candidate characters with the same Cantonese pronunciation.

It contains over 15,000 characters that are included in:

- International Ideographs Core (IICORE)
- Hong Kong Supplementary Character Set(HKSCS)

Characters are coded in:

- ISO/IEC 10646-1:2000
- ISO/IEC 10646:2003 and its Amendment 1.

Welcome to use the WebIME.
